4. FIRST-AID MEASURES

EYE CONTACT: Flush thoroughly with water. If irritation occurs, call a physician.
SKIN CONTACT: Wash contact areas with soap and water. Remove contaminated clothing. Launder contaminated clothing before reuse.
INHALATION: Remove from further exposure. If respiratory irritation, dizziness, nausea, or unconsciousness occurs, seek immediate medical assistance and call a physician. If breathing has stopped, use mouth to mouth resuscitation.
INGESTION: Do not induce vomiting. Give 1 to 2 glasses of water. Get medical assistance.
NOTE TO PHYSICIANS: Material if aspirated into the lungs may cause chemical pneumonitis. Treat appropriately.

5. FIRE-FIGHTING MEASURES

EXTINGUISHING MEDIA: Carbon Dioxide, Foam, Dry Chemical, Water Fog.
SPECIAL FIRE FIGHTING PROCEDURES: Evacuate area. Use water to keep fire exposed containers cool. If a leak or spill has not ignited, use water spray to disperse the vapors and to protect personnel attempting to stop leak. Water spray may be used to flush spills away from exposures. Prevent runoff from fire control or dilution from entering streams, sewers, or drinking water supply.
SPECIAL PROTECTIVE EQUIPMENT: For fires in enclosed areas, fire fighters must use self-contained breathing apparatus.
UNUSUAL FIRE AND EXPLOSION HAZARDS: Extremely flammable. Vapor accumulation could flash and/or explode if in contact with open flame. Flash Point C(F): -40(-40) (ASTM D-56). Flammable limits - LEL: 1.1%, UEL: 7.6%. NFPA HAZARD ID: Health: 0, Flammability: 3, Reactivity: 0
HAZARDOUS DECOMPOSITION PRODUCTS: Carbon monoxide.

6. ACCIDENTAL RELEASE MEASURES

NOTIFICATION PROCEDURES: Report spills as required to appropriate authorities. U. S. Coast Guard regulations require immediate reporting of spills that could reach any waterway including intermittent dry creeks. Report spill to Coast Guard toll free number (800) 424-8802. In case of accident or road spill notify CHEMTREC (800) 424-9300.
PROCEDURES IF MATERIAL IS RELEASED OR SPILLED: Adsorb on fire retardant treated sawdust, diatomaceous earth, etc. Shovel up and dispose of at an appropriate waste disposal facility in accordance with current applicable laws and regulations, and product characteristics at time of disposal. Eliminate all ignition sources. Runoff may create fire or explosion hazard in sewer system.
ENVIRONMENTAL PRECAUTIONS: Prevent spills from entering storm sewers or drains and contact with soil.

PERSONAL PRECAUTIONS: See Section 8
7. HANDLING AND STORAGE

HANDLING: Avoid contact with skin. Avoid inhalation of vapors or mists. Use in well ventilated area away from all ignition sources. The U.S. Occupational Safety and Health Administration (OSHA), finalized an updated regulation on benzene on September 11, 1987. This standard exempts the storage, transportation, distribution, dispensing, sale or use of gasoline, motor fuels, or other fuels containing benzene, subsequent to the final discharge from bulk wholesale storage facilities. Certain indoor motor fuel dispensing operations are covered regardless of the exemption. The standard establishes requirements covering potential employee exposures, container labeling, medical programs, and employee training. Refer to Chapter 29 of the Code of Federal Regulations (CFR) part 1910.1028 for specific guidance. The OSHA mandated label of "Danger. Contains Benzene. Cancer Hazard. " is required only at affected operations.

STORAGE: Drums must be grounded and bonded and equipped with self-closing valves, pressure vacuum bungs and flame arresters. Store away from all ignition sources in a cool area equipped with an automatic sprinkling system. Outside or detached storage preferred. Storage containers should be grounded and bonded.

8. EXPOSURE CONTROLS/PERSONAL PROTECTION

VENTILATION: Use in well ventilated area with local exhaust ventilation. Ventilation required and equipment must be explosion proof. Use away from all ignition sources.

RESPIRATORY PROTECTION: Approved respiratory equipment must be used when airborne concentrations are unknown or exceed the TLV.

EYE PROTECTION: If splash with liquid is possible, chemical type goggles should be worn.

SKIN PROTECTION: If prolonged or repeated skin contact is likely, impervious gloves should be worn. Good personal hygiene practices should always be followed.

11. TOXICOLOGICAL INFORMATION

---ACUTE TOXICOLOGY---

ORAL TOXICITY (RATS): Practically non-toxic (LD50: greater than 2000 mg/kg). ---Based on testing of similar products and/or the components.
DERMAL TOXICITY (RABBITS): Practically non-toxic (LD50: greater than 2000 mg/kg). ---Based on testing of similar products and/or the components.
INHALATION TOXICITY (RATS): Practically non-toxic (LC50: greater than 5 mg/l). ---Based on testing of similar products and/or the components.
EYE IRRITATION (RABBITS): Practically non-irritating.
SKIN IRRITATION (RABBITS): Practically non-irritating. (Primary Irritation Index: greater than 0.5 but less than 3). ---Based on testing of similar products and/or the components.

OTHER ACUTE TOXICITY DATA: Inhalation of vapors/mists may cause respiratory system irritation.

---CHRONIC TOXICOLOGY (SUMMARY)---
Recent studies with laboratory animals have shown that gasoline vapors administered in high concentrations over a prolonged period of time (two year life time studies) caused kidney damage and kidney cancer in male rats and liver cancer in female mice. These effects were not seen in female rats or male mice. Generally, human exposures to gasoline vapors are considerably less than those used in the animal toxicity studies. As far as scientists know, low level or infrequent exposure to gasoline vapors is unlikely to be associated with cancer or other serious diseases in humans. Prolonged repeated skin contact with low viscosity materials may defat the skin resulting in possible irritation and dermatitis.

---OTHER TOXICOLOGY DATA---
Gasoline consists of a complex blend of petroleum/processing derived paraffinic, olefinic, naphthenic and aromatic hydrocarbons which may contain up to 5 percent benzene, with 1-2 percent being typical in the United States; and low levels of multifunctional additives. Repeated exposure to low levels of benzene (<100 ppm) has been reported to result in blood abnormalities in both animals and humans, including anemia and, in rare cases, leukemia. These effects were not observed in laboratory animals following repeated exposure to vapors from unleaded gasoline containing 2 percent benzene.
